SureFox
Secure Browser

Secure. Monitor. Manage.

SureFox secure browser by 42Gears UEM creates a safe and secure browsing environment on mobile devices and desktops. This makes mobile devices suitable for use as self-service web kiosks and even data collection terminals for various business types.

Restrict Users To Only Allowed Websites
SureFox allows browsing of selected websites and webpages on a mobile device. Choose a single website or multiple websites to turn your Android, iOS or Windows mobile devices into web kiosks within minutes.

Device Security
SureFox blocks access to all non-whitelisted websites, device home, device settings, lockdown settings and even disables hardware keys. It also disables the title bar or bottom bar to restrict quick access to notifications, recent apps and settings.

Cloud Support
SureFox enables export and import of lockdown settings to a secured Cloud for easy mass configuration and deployment. Use Cloud option to setup auto-configuration of device and lockdown settings.

Highly Customizable UI
SureFox also offers options to customize the look and feel of the web kiosk. Set wallpapers, add screensaver and specify screen behavior on specified status and more.

More than 18,000 customers across 115 countries rely on 42Gears to harness the power of a limitless digital workspace. We pride ourselves on being a nimble and flexible organization.

SureFox - Secure Browser

SureFox, a secure browser solution, restricts users to browse only allowed websites on the device. It lets you convert mobile devices into kiosks, allows remote mass device configuration to save time, and offers advanced lockdown features for improved device and data security.

Key Features

Whitelist Websites
Whitelist and allow browsing of only approved website(s) that are required by the users.

Launch at Startup
Set a website to launch automatically whenever a device is switched on or rebooted.

Device Security and Hardware Keys Restriction
