

## Lockdown Android Tablets & Mobiles Devices

### Key Features

- Allows execution of "approved" applications only
- Hide/Disable Bottom Bar on Android HoneyComb, ICS & JellyBean tablets
- Run your app in kiosk mode
- Password protection for administrator access
- Widget Support
- UI Customization Options
- Suppress System Notifications
- Brand as your own software
- Easy Mass Deployment and many more...

Android provides an extensively powerful platform to perform almost all kinds of business productive activities. However an open mobile device provides a big opportunity for users to use the company device for his personal interests, entertainment and gaming purposes too, which can badly affect the organization's productivity.

Besides, an inexperienced worker can also corrupt the device settings unintentionally, rendering the device useless for hours, which again results in loss of crucial business time.

In a consumer-centric environment, the device usage can be completely different where the device administrator might want to run an application in a kiosk.

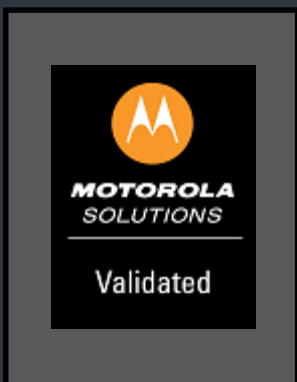

### Key Benefits

- Increase productivity of Mobile Workers
- Reduce device maintenance and support costs
- Prevent device misuse
- Password-protect sensitive data and applications
- Over The Air(OTA) device lockdown settings

**SureLock** for Android provides comprehensive lock down solution for tablets & mobile devices. It restricts the users to launch and use only the "approved" applications and features of the mobile device. This is also called Kiosk Mode of operation

Apart from securely locking your device, SureLock provides UI customization options such as wallpaper, application icons, widget support and icon relocation on its home screen

What this means to you is complete access to device whenever required without the risk of theft of data or misuse of device. SureLock proves its worth in shared environment where device data security is of utmost importance.

# SureLock for Android
