

Mobility Challenges for Enterprises & how SureMDM Addresses them

Use of mobile devices at workplaces brings convenience, flexibility, portability, ease of operation, and easy access to data. No wonder they get deployed across organizations of diverse sizes. However, organizations face the following challenges around device management:

Data Security:

Organizations often fail to enforce proper data security policies. With SureMDM, IT admins can enforce password policies and device usage policies.

Device Accountability:

Remote device management proves to be a difficult task for IT admins. With SureMDM, IT admins can remotely manage all endpoints from a single console.

Device Misuse Prevention:

Device misuse impacts employee productivity. SureMDM enables IT admins to lock down devices into kiosk mode, preventing device misuse.

Application Management:

Updating apps on field devices proves to be time-consuming. With SureMDM, applications installed on multiple devices can be updated simultaneously.

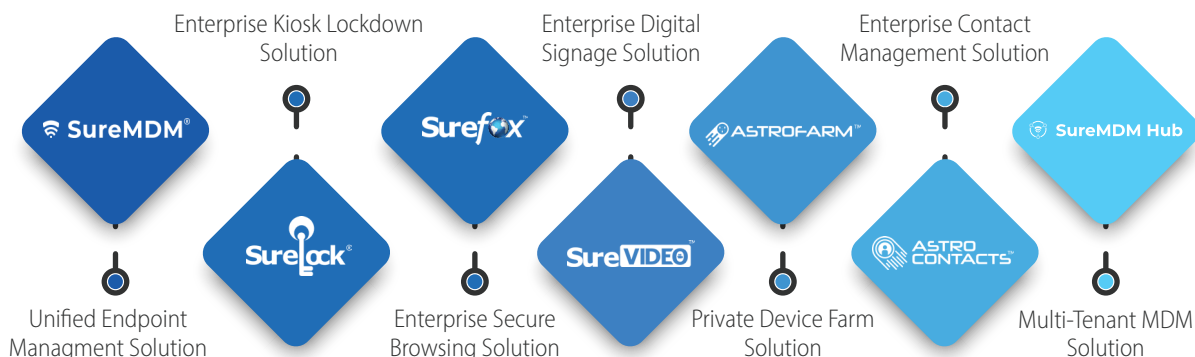

Device Location & Health Tracking:

Device location and health tracking may be really difficult. SureMDM allows IT admins to do real-time monitoring of devices, and their status.

About 42Gears

42Gears is a leader in enterprise mobility management, offering cutting-edge solutions that aim to transform the digital workplace. Delivered from the cloud and on-premise, 42Gears products support all major mobile and desktop operating systems, enabling IT and DevOps teams to improve frontline workforce productivity and the efficiency of software development teams. 42Gears products are used by over 18,000 customers across various industries in more than 115 countries and are available for purchase through a global partner network.
