

 **SureMDM**®

Streamlining Device Management Across Industries

Education

► Pain Points

- Provisioning large number of devices with required settings and policies
- Locking down the devices to allowed applications
- Allowlisting/Blocklisting URLs on the devices
- Remote Troubleshooting of devices
- Pushing content (media files) and distributing applications to the devices remotely
- Restricting unauthorized application downloads on the enrolled devices
- Restrict access to hardware keys and device settings
- Monitoring devices remotely
- Remote wipe of devices when lost/stolen
- Real time location tracking of devices

▶ SureMDM: Redefining Device Management in Education

Device Management

Remotely provision devices with app installation and security policies.

Security Measures

- ▶ Lock devices with Application Kiosk mode.
- ▶ Control access with Browser Lockdown mode.
- ▶ Disable settings and hardware keys for enhanced security.

Remote Troubleshooting

Take control of remote devices, troubleshoot without service center visits.

File Distribution

Share enterprise files securely using SureMDM file store and transfer jobs.

Application Management

- ▶ Control and distribute mobile apps with Enterprise App Store.
- ▶ Push apps from Google Play, APK files, and web apps using Application Policy Profile.
- ▶ Disable unauthorized app installations with System Settings Profiles.

Performance Monitoring

Remotely monitor device health and performance parameters.

Data Security

Wipe sensitive data remotely for lost or stolen devices.

Location Tracking

- ▶ Real-time and historical location tracking for mobile devices.
- ▶ Store tracking information for up to six months for analysis.

Financial services & FinTech

► Pain Points

- Enrolling and provisioning mobile devices on premise or cloud
- Remote monitoring and managing of devices at work places
- Securing corporate devices and data
- Remote troubleshooting of devices
- Silently Installing applications and application updates
- Monitoring mobile data usage
- Transferring sensitive corporate content to the enrolled devices
- Locking down the devices to required applications only
- Preventing device misuse at work places
- Restricting access to device settings and hardware keys
- Ensuring device compliance
- Location tracking of the devices

► SureMDM: A Strategic Partner for Financial Efficiency

Remote Device Management

- Enroll and provision devices remotely with various methods.
- Deploy as SaaS or On-Premise based on requirements.

Versatile Platform Support

Manage Android, iOS, macOS, Windows, Linux, VR, WearOS, ChromeOS, IoT devices via SureMDM Web Console.

Performance Monitoring

- Remotely monitor device health parameters.
- Track memory, battery, CPU, WiFi signal strength.

Application Management

- Remotely install/upgrade applications.
- Support silent installation for minimal end-user interaction.

Remote Troubleshooting

Take control of remote devices for troubleshooting, avoiding service center visits.

Telecom Management

Set data usage thresholds, enable call and SMS logs, and block mobile data exceeding limits.

File Sharing

- Securely share enterprise files using SureMDM file store and transfer jobs.

Compliance Configuration

- Configure compliance rules and actions using Compliance Job.
- Ensure security against rooting/jailbreaking and SIM card changes.

Security Configuration

- Configure security policies, including password complexity and Two-Factor Authentication.
- Implement encryption tools like BitLocker and FileVault.

▶ **SureMDM: A Strategic Partner for Financial Efficiency**

Location Tracking

- ▶ Real-time location tracking.
- ▶ Utilize Remote Buzz job to locate lost devices.
- ▶ Remotely wipe sensitive data in case of loss or theft.

Device Lockdown Modes

- ▶ Lock devices with only essential apps using Application Kiosk mode.
- ▶ Allow/block specific URLs with Browser Lockdown mode.

Warehousing and Logistics

▶ Pain Points

- ▶ Bulk enrollment of different types of devices
- ▶ Managing large number of devices remotely
- ▶ Distributing the applications on devices
- ▶ Installation of OS updates (Firmware updates)
- ▶ Remote troubleshooting of devices
- ▶ Reduction of mobile data costs
- ▶ Location tracking of the devices with location history
- ▶ Monitoring the device health and performance status
- ▶ Remote wipe of devices when lost/stolen
- ▶ Locking down the devices to required applications only
- ▶ Ensuring device compliance
- ▶ Restricting access to device settings and hardware keys
- ▶ Securing corporate devices and data

► SureMDM: Streamlining Warehouse Operations

Remote Device Enrollment

Enroll devices remotely with various methods like Android Enterprise, Zero Touch, QR codes, and Automated Device Enrollment.

Versatile Device Management

Manage a wide range of devices through SureMDM's Web Console, supporting Android, iOS/iPadOS, macOS, Windows, Linux, VR, WearOS, ChromeOS, and IoT.

Application Management

- Distribute and control mobile apps using
- SureMDM Enterprise App Store and Install Application Jobs.
- Push apps from Google Play, APK files, and web apps with Application Policy Profile.

OS Update Management

Schedule and manage OS updates (Firmware updates) using SureMDM.

Remote Troubleshooting

Take remote control of devices for troubleshooting instead of service center visits.

Telecom Management

Set data usage thresholds, enable call and SMS logs, and block mobile data exceeding set limits.

Location Tracking and Device Monitoring

- Track real-time and historical locations with SureMDM's location tracking.
- Remotely monitor device health parameters and performance metrics.

Security Measures

- ▶ Locate lost devices with the Remote Buzz job and remotely wipe sensitive data.
- ▶ Lock devices with only essential apps using Application Kiosk mode.
- ▶ Disable access to device settings and hardware keys for enhanced security.

Compliance Configuration

Configure compliance rules and actions with the Compliance Job.

Security Policy Configuration

Set up various security policies, including password complexity, Two-Factor Authentication, and encryption tools like BitLocker & FileVault, and Mobile Threat Defense Policy using SureMDM.

Retail & Ecommerce

► Pain Points

- Mass deployment of devices at different locations
- Configuring self service kiosks for add promotions
- Sharing mobile devices for multiple users
- Managing different types of devices at multiple locations
- Remote troubleshooting of devices
- Silently Installing applications and application updates at multiple locations
- Monitoring and restricting mobile data usage
- Locking down the devices to required applications only
- Preventing unauthorized access and device misuse at work places
- Location tracking of the devices
- Monitoring the device health and performance remotely
- Restricting access to device settings and hardware keys

▶ SureMDM: Streamlining Retail Operations

Remote Device Enrollment

- ▶ Quickly enroll and provision a large number of devices using various methods.
- ▶ Install and configure apps, and apply security policies remotely.

Digital Signage Capabilities

- ▶ Transform devices into versatile digital signage displays.
- ▶ Deliver targeted content like ads, news, and product videos to grab customer attention.

Shared Device Mode

- ▶ Share enterprise devices among multiple employees.
- ▶ Single Sign-On access, approved apps, and effective task execution.

Device Compatibility

- ▶ Manage a variety of devices remotely through SureMDM's Web Console.
- ▶ Supports Android, iOS, macOS, Windows, Linux, VR, WearOS, ChromeOS, and IoT devices.

Remote Troubleshooting

- ▶ Admins can remotely take control and troubleshoot devices at remote locations.
- ▶ Avoid the need to shift devices to service centers.

Application and Telecom Management

- ▶ Remotely install/upgrade applications and support silent installations.
- ▶ Telecom management for setting data usage thresholds and call/SMS logs.

Device Lockdown Modes

- ▶ Application Kiosk mode for locking devices to essential business apps.
- ▶ Browser Lockdown mode to allow/block specific URLs on end-user devices.

Security Measures

- ▶ Disable access to device settings and hardware keys using Kiosk mode.
- ▶ Prevent device misuse and ensure intended use only.

Location Tracking and Security

- ▶ Real-time location tracking for devices.
- ▶ Remote buzz to locate lost devices and wipe sensitive data in case of loss or theft.

Device Health Monitoring

- ▶ Monitor device health and performance parameters remotely.
- ▶ Track metrics such as available memory, battery percentage, CPU usage, and WiFi signal strength.

Transportation and Aviation

► Pain Points

- Mass deployment of devices
- Managing the geographically dispersed mobile devices remotely
- Location tracking of the devices and history retention
- Sharing mobile devices for multiple users
- Remote troubleshooting of devices
- Locking down the devices to required applications only
- Preventing unauthorized access
- Installing and updating applications remotely
- Monitoring the device health and performance remotely
- Wiping off the sensitive data off the devices when device gets lost or stolen

▶ SureMDM: Elevating Transportation and Aviation Management

Remote Device Management

- ▶ Enroll and provision devices remotely with various methods.
- ▶ Deploy as SaaS or On-Premise based on requirements.

Universal Device Support

- ▶ Manage a variety of devices with SureMDM's Web Console.
- ▶ Compatible with Android, iOS, macOS, Windows, Linux, VR, WearOS, ChromeOS, and IoT devices.

Shared Device Mode

- ▶ Share enterprise devices with multiple employees.
- ▶ Secure access using Single Sign-On (SSO) credentials.

Data Security Measures

Wipe sensitive data remotely for lost or stolen devices.

Remote Troubleshooting

Take control and troubleshoot devices remotely, eliminating service center visits.

Application Management

- ▶ Distribute, control, and manage mobile apps with SureMDM Enterprise App Store.
- ▶ Push apps from Google Play, APK files, and web apps with Application Policy Profile

Location Tracking

- ▶ Real-time and historical location tracking.
- ▶ Store tracking info for six months for analysis.
